EDUCATION

Bachelor's of Science in Informatics | University of Washington

December 2025

EXPERIENCE

Software Development Engineer Intern

June 2025 - September 2025

Amazon | Seattle, WA

- Enhanced a production *AWS Lambda* function executed across all Amazon purchases by developing a Java-based decision algorithm that classified “Shop With Points” customer behavior based on apply by default preferences, reaching 100% accuracy on all “Shop With Points” purchases.
- Designed and implemented a telemetry storage solution in *AWS DynamoDB* to persist customer interaction data generated by the Lambda service, enabling historical analysis and downstream analytics.
- Built an automated *ETL pipeline* using *AWS Glue* to extract telemetry from *AWS DynamoDB* and load it into *AWS QuickSight*, enabling daily monitoring of production Lambda service.

Information Technology Operations Intern

July 2024 - May 2025

USAbile Life

- Redesigned and optimized 3 automated workflows utilizing low-code solutions, greatly reducing the need for manual ticket processing by the ITSM operations team.
- Managed 100+ employee lifecycle transactions (transfers, hires, terminations) company-wide using ITSM tools, ensuring seamless HR operations.

PROJECTS

Open DevSecOps | *HTML, CSS, JavaScript*

January 2025 - June 2025

- Developed a gamified *DevSecOps* learning platform using *HTML*, *CSS*, and *JavaScript*, featuring modular lessons, interactive quizzes, progress tracking, and is publicly deployed via *GitHub Pages*.
- Collaborated on a 5-person team to design and implement educational content covering *CI/CD*, *containerization*, and application security principles.
- Implemented *Google OAuth* authentication with *Firebase Authentication*, enabling secure sign-in through Google accounts.
- Designed and integrated a *Cloud Firestore* database to persist user profiles, learning progress, quiz scores, and achievements across sessions.

Ice Cream Database | *SQL, PySpark*

September 2025 - December 2025

- Designed and implemented a transactional database to manage customer purchases, order history, and inventory data for a mock ice cream shop using *SQL* and relational database design principles.
- Developed an *ETL Pipeline* with *PySpark* to transform transactional data into a *Star Schema* data warehouse optimized for analytics and reporting.

Zen Mental Health App | *React, Javascript XML, CSS*

January 2024 - March 2024

- Engineered an interactive mental health tracking web application in *React*, leveraging component-based architecture to deliver a dynamic and responsive user experience.
- Integrated *Firebase Authentication* for secure user login and account management.
- Utilized *Firebase Firestore* to store chatbot conversation history and user data.

TECHNICAL SKILLS

Programming Languages:

Java | Javascript | Git | SQL | Python | HTML | CSS | C | Bash

Frameworks:

React | JUnit
